Turbosmart's new Boost Tee

The long-awaited replacement for Turbosmart's enduring entry-level Gated Boost Controller is here. Redesigned inside and out, the new-look Boost Tee is smaller and lighter than its predecessor, offering a superior control, more linear adjustment and a greater range of adjustability, making it suitable for a much wider range of applications including sensitive systems as seen on the Nissan Skyline range.

A new internal design allows the user to achieve more precise and dynamic increases in boost over the wastegate base pressure. The new Boost Tee also comes with a completely redesigned mounting system making it much easier to install.

Enthusiasts and dealers alike will be pleased to know that the new Turbosmart Boost Tee retains its excellent value-for-money factor, making it an ideal choice for a budget-minded performance tuner.
